SUMMARY

DevOps Engineer with hands-on experience building and operating hybrid cloud infrastructure across AWS and self-hosted Kubernetes environments. Certified in AWS Solutions Architecture, Red Hat System Administration , and Kubernetes. Proven ability to design event-driven pipelines, automate CI/CD workflows, and manage production-grade systems — with a background as a combat officer bringing strong leadership, problem-solving, and execution under pressure.

EXPERIENCE

DevOps Engineer

08/2025 - Present

- Completed a **DevOps internship** at a mid-size tech company, gaining hands-on production experience with **AWS, Kubernetes, and GitHub Actions CI/CD pipelines**
- Built **BetOps** end-to-end as a personal project, designing and deploying a full hybrid cloud architecture spanning AWS managed services, self-hosted Kubernetes on a Proxmox homelab, and secure VPN-connected private networking — all provisioned with Terraform and automated via GitHub Actions
- Provisioned and maintained **AWS cloud infrastructure**, working with core services to support scalable and reliable application delivery
- Deployed and managed containerized workloads on **Kubernetes**, handling deployment configurations, resource management, and service discovery

Combat Officer

IDF | Artillery & Ground Forces

03/2021 - 04/2025

- Led and commanded a team of soldiers in high-stakes, dynamic environments, ensuring mission success through meticulous planning and real-time problem-solving.
- Developed and delivered training programs for subordinates, fostering a culture of excellence and professional growth.

PROJECTS

Homelab | Personal Infrastructure Project

Built and operate a **production-grade homelab** on **Proxmox**, running a **k3s Kubernetes cluster** across Linux VMs — connected to **AWS private subnets** via **Tailscale VPN** for secure hybrid cloud communication without any public exposure and with high security.

'BetOps' | Personal DevOps Project

Designed and operated the full infrastructure of a real-time prediction market platform, with emphasis on hybrid cloud-homelab architecture.

- Architected and deployed a **cloud-native, event-driven backend** on AWS, leveraging managed services to ensure scalability and separation of concerns.
- Built and managed a self-hosted **k3s Kubernetes cluster** on **Proxmox** homelab, running production workloads as containerized workers
- Designed a **hybrid cloud architecture** connecting self-hosted **Kubernetes** workloads to AWS private infrastructure through a secure VPN tunnel.
- Implemented a **decoupled microservices pipeline** where each component owns a single responsibility — from request handling to async processing to data persistence
- Automated the full **CI/CD lifecycle** from code commit to production deployment across both cloud and on-prem workloads

CERTIFICATIONS

AWS SAA-C03

AWS Certified Solutions Architect - Associate

REDHAT RHCSA

Red Hat Certified System Administrator

Kubernetes CKA

Certified Kubernetes Administrator

EDUCATION

High school graduated

Ehad-Haam

2017 - 2020

- 5 units in English, Math and Physics
- 10 units in Computer science and Software engineering

Officers Training

IDF

2022

- Combat officers training

DevOps course "Lohamim le'hightech" ort singalovsky

2025 - 2026

- An intensive DevOps and cloud program covering advanced cloud architecture, container orchestration, Linux administration, Python scripting, SQL and networking

SKILLS

Technical skills

Linux	SQL	Networking	
Kubernetes	Docker	AWS	GIT
HTML	CSS	Python	Bash
Grafana	Ansible	ArgoCD	CICD
VPN	PostgreSQL	Terraform	
Terragrunt	Helm	Docker compose	
Github	Prometheus	Proxmox	
Tailscale
